

- **AI-Driven Analytics and Forecasting:** Leveraging the system's accumulated database records to train machine learning models. These models could forecast peak operational hours, predict inventory requirements to further reduce food wastage and offer personalized menu recommendations based on a student's historical purchase data.
- **Automated Notification System:** Integrating an SMS, email or push notification service to automatically alert students the moment their order status updates from "Preparing" to "Ready," eliminating the need to wait near the physical counter.
